Write a complete C++ program to calculate the income tax based on the following information.
Ask the user to input their marital status and annual income and marital status

Marital Status	Annual Income (RM)	Tax
1. Single	On the first 30000	5%
	On the next 20000	7.5%
	Amount over 50000	10%
2. Married	On the first 50000	5%
	On the next 30000	7.5%
	Amount over 80000	10%

The output should display the annual income, marital status, the tax amount and the net income for the user.
